## **DETAILED ACTION**

### ***Response to Amendment***

The amendment filed 10 September 2007 has been accepted and entered.

### ***Allowable Subject Matter***

1. Claims 1-12 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the prior art of record does not disclose or reasonably suggest, along with the other claimed limitations, processing circuitry for a spectrometry chain comprising: namely, a differentiator stage directly connected to an assembly that comprises the integrator and integrator duration control means, wherein the differentiator stage and the assembly form a passband filter with self adapting time constants. The prior art of record most often discloses an integrator stage that co-operates with an integration control means for durations that are substantially equal to the duration of each detector current pulse. The instant application's disclosure is patentably distinct over the prior art of record in that the passband filter with self adaptive time constants allows for the expression of incident particle energy with much higher precision.

Regarding claim 2-12, the balance of claims is found allowable due to their dependence upon an already allowed claim and lacking any technical errors.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Response to Arguments***

3. Applicant's arguments, see pages 4-5 the amendment, filed 10 September 2007, with respect to claim 1 have been fully considered and are persuasive. The rejection of claims 1-12 has been withdrawn.

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
